INNOVATIVE PROJECTS

Its not about ideas. Its about making Ideas happen

Concrete Paver block by partial replacement of Cement with Flyash and PROPOSIS JULIFLORA ASH

Removal of fluoride from water by electrocoagulation process

Cement Based Tiles with Plastic and Marble dust

Utilization of Food Waste for the production of Energy

COCO Coir and light weight sand in production of light weight hollow block

Eco restoration project for treatment of waste water streams polluting the Kowsika River in Virudhunagar using phytoremediation concept.

This pilot study was carried out under the guidance of expert member Dr.S.Mohan, Professor, IIT Madras and Public Works Department, Virudhunagar

UTILISATION OF FOOD WASTE FOR THE PRODUCTION OF ENERGY

The basic concept is the conversion of waste into energy. In order to utilize the waste produced, biogas plant is constructed at our campus and so this lead to the production of combustibile energy.

01

With an input of rice starch and food remaining, the biogas is produced under anaerobic digestion.

02

This gas is flammable and it will be the partial replacement of LPG and the digested slurry is used as plant manure.

03

This manure is eco-friendly, organic and helps in sustainable development.
